RCB'S MARATHON TRAINING

Wesley Handy, Franco Sevillano, Jihyun Gong, Harrison Fung

BUILDING A RUNNING COMMUNITY

RCB [RUNNER'S CLUB]

The marathon app for free, convenient and flexible training

CONCEPT

- RCB [Runner's Club] is a marathon training app for runners.
- It allows people who wish to run together to socialize through the features on the app in order to prepare for a marathon race.
- It suggests several paths based on the user's location.
- It provides a training schedule for users and plans their daily routine.

MOTIVATION

- The idea of the app came about due to a lack of apps that can get people who have the same passion for running, to get together with others.
DESIGN PROCESS

Framework:

- Materialize
- Jquery Mobile
- Firebase

TECHNICAL DEVELOPMENT

Weather

42.3°F Overcast
Wind From the ESE at 4.9 MPH Gusting to 6.0 MPH
Humidity: 53%

Park West Village, NY

FUTURE DEVELOPMENT

- We would like to include a GPS system.
- Allow users to input a workout of their own.
- Allow users to pick their own start date for the plan.
- Find a method to get the maps to load on a secure connection.
- The project is scalable to include other marathons and running events.
